

Alan Tsai  
CS435 HW4

This assignment is tour into 2D picture. Everything should be working. One part I struggled with was forgetting to check the index boundary against newImage and the max width and height. Which resulted Index out of bound. The following command is used to run the code, and sample debug outputs and final results images.

```
python hw4.py data/sjerome.jpg --inputs 174,89,486,332,389,247
```
